

Shown above (top to bottom): Image T65 Tower, T55 Tower, T45 Tower, S50 Surround, B25 Bookshelf, B15 Bookshelf, C60 Center Channel and C40 Center Channel For home theater and serious music listening alike, demand high impact, accurate ultra-deep bass from powered subwoofers like the SubSeries 6i (left) and SubSeries 5i.

At first glance, the Image lineup looks conventional enough—though a good deal more than conventionally handsome with strikingly simple, slim, elegant lines. But look a bit more closely and these eight new PSB models reveal a great deal of innovative, unconventional, even radical thinking.

Here is a range of unusually narrow-and-deep enclosures that promote superb frequency response with dramatically true-to-life "soundstage." They also contribute to the Image lineup's cohesive family sound, so that virtually any combination of Image Series speakers can cooperate to produce tonally seamless, spatially integrated surround sound—a must for any serious home theater. And every Image full range design is magnetically shielded for flexible home theater placement.

Three all-new, proprietary drivers, in several variations, fulfill the needs of the entire series: a 1-inch liquid-cooled aluminum-dome tweeter, used throughout the series, and 5-1/4-inch and 6-1/2-inch injection molded, metalized, polypropylene woofers. All are ground-up PSB designs dedicated to exceptionally linear, dynamic performance and higher consistency.

But the Images' central innovation is its series of four standardized pairings of drivers that, combined in the eight models, anchors the Image Series.

The unifying front baffle is a radical design precisely radiused, textured, and shaped from man-made composites. Though expensive to "tool up," with only four variations to manufacture this system is highly economical over the long run. More importantly, its acoustically inert, non-reflective structure promotes the Images' accurate response, lifelike imaging, and impressive depth. And since cost savings in one area can be applied to others the Image Series cabinets can be fabricated of heavy, non-resonant wood composites with extensive cross-bracing. This yields remarkably rigid, non-resonant, sonically pure enclosures—measurably and demonstrably superior to those of virtually any competing designs.

The Image models combine easily to produce seamless results across the critical "front stage". There are two horizontal Image models with impressive

mid to low-frequency output—enough to reproduce the deepest male voices effortlessly and naturally: The unobtrusive Image C40, standing just 6-1/2-inches, and the slightly larger Image C60, ideal for bigger rooms or systems. In sharp contrast to nearly all other center-channel speakers. The Image family's model S50 surround speaker (rear channel) is just as carefully designed for its role, with substantial dynamics and uncommonly wide ambient dispersion.

One final thought: Talk is cheap—real cheap, in the highly competitive world of hi-fi loudspeakers. So visit a PSB audio specialist to hear what we mean. Five minutes spent listening, even to the modest PSB Image B15s, will say more than a thousand words—including the ones you just read.
